Week 4 Exercise: JS Form Handlers

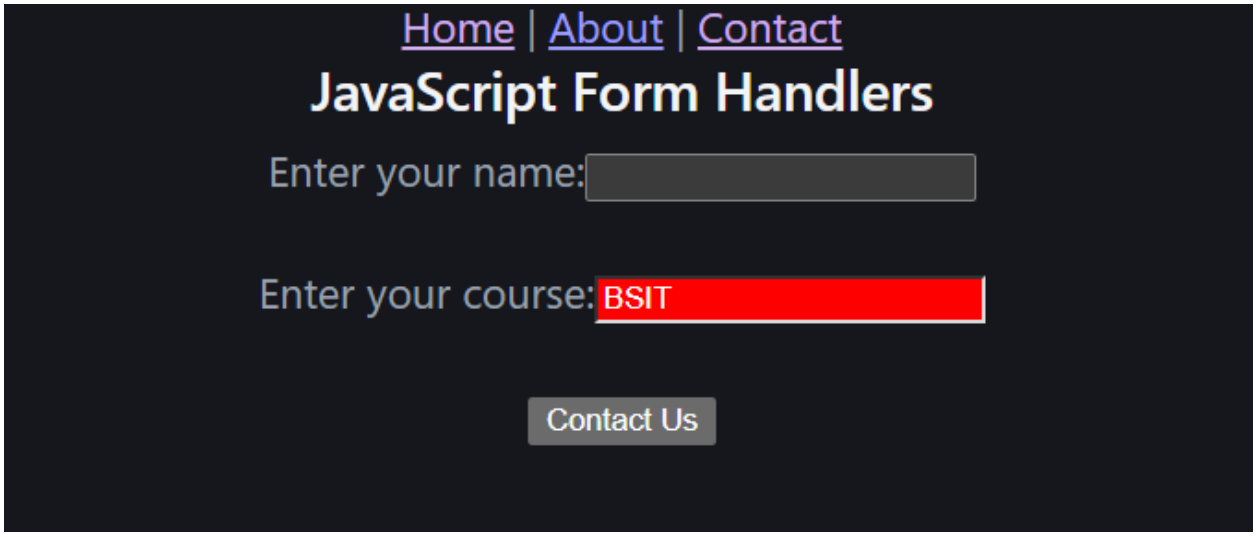

Domingo, Gabriel Ethan Warrick A.
BSIT - 304I

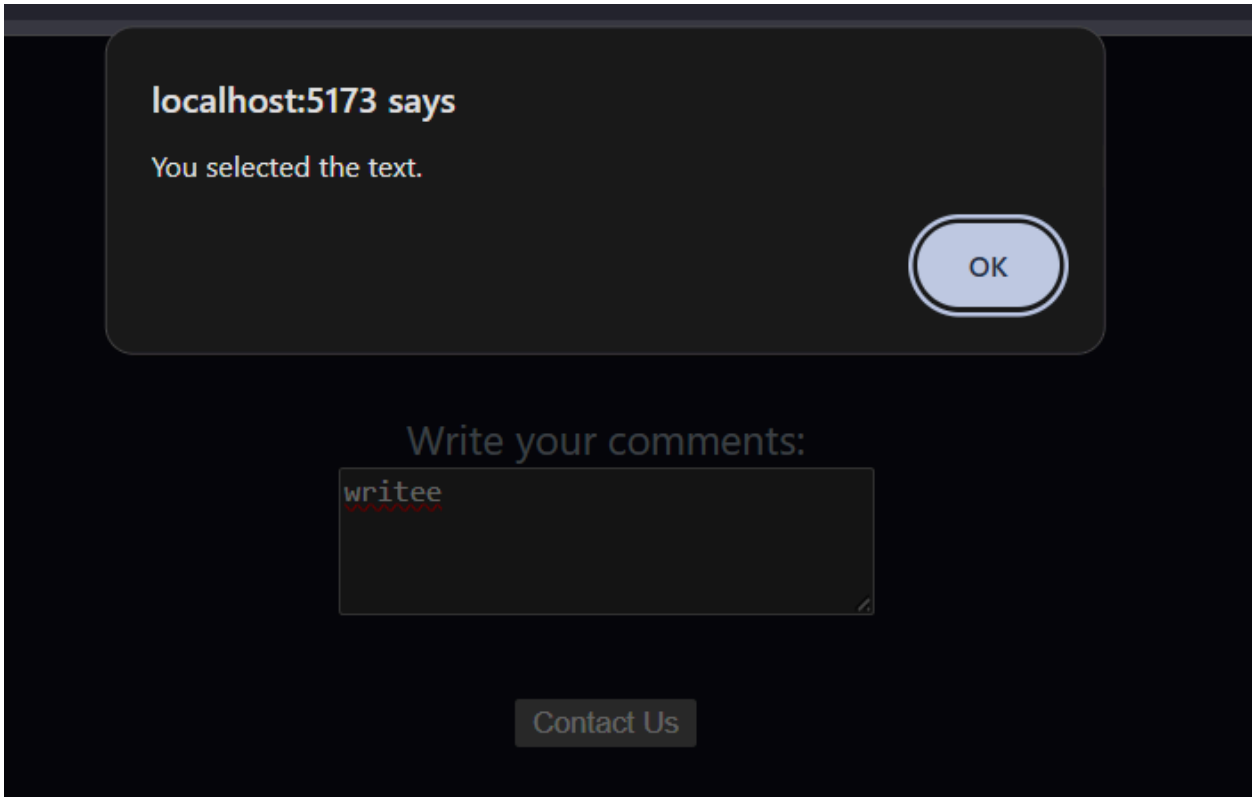

An input box for the user's name was made and the onChange event handler was utilized. As soon as a name was typed in, the message "Thank you for your input." popped up.

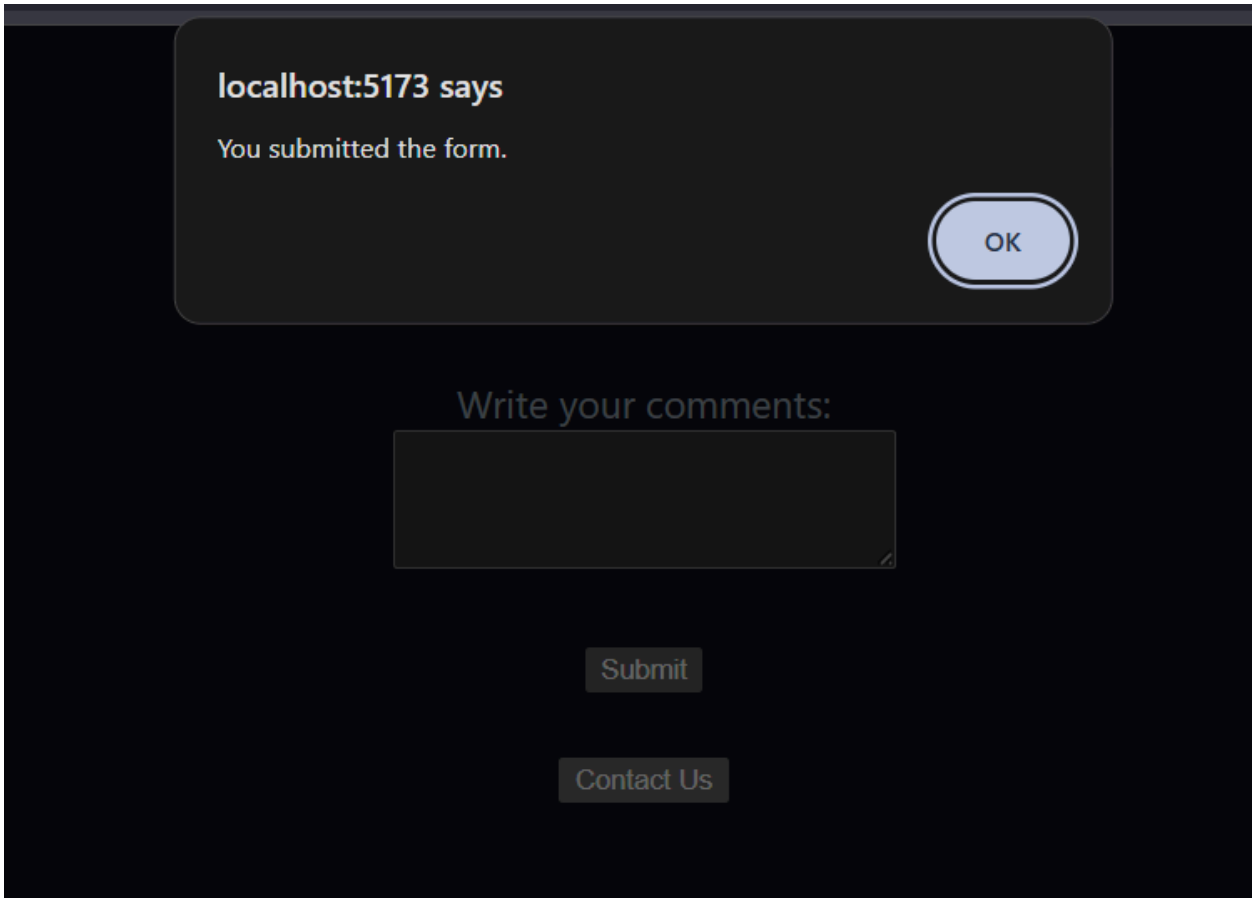

The onFocus event handler was used in the course input box. Once I clicked into the input box, it turned yellow in color. This is an indication that the onFocus event worked well

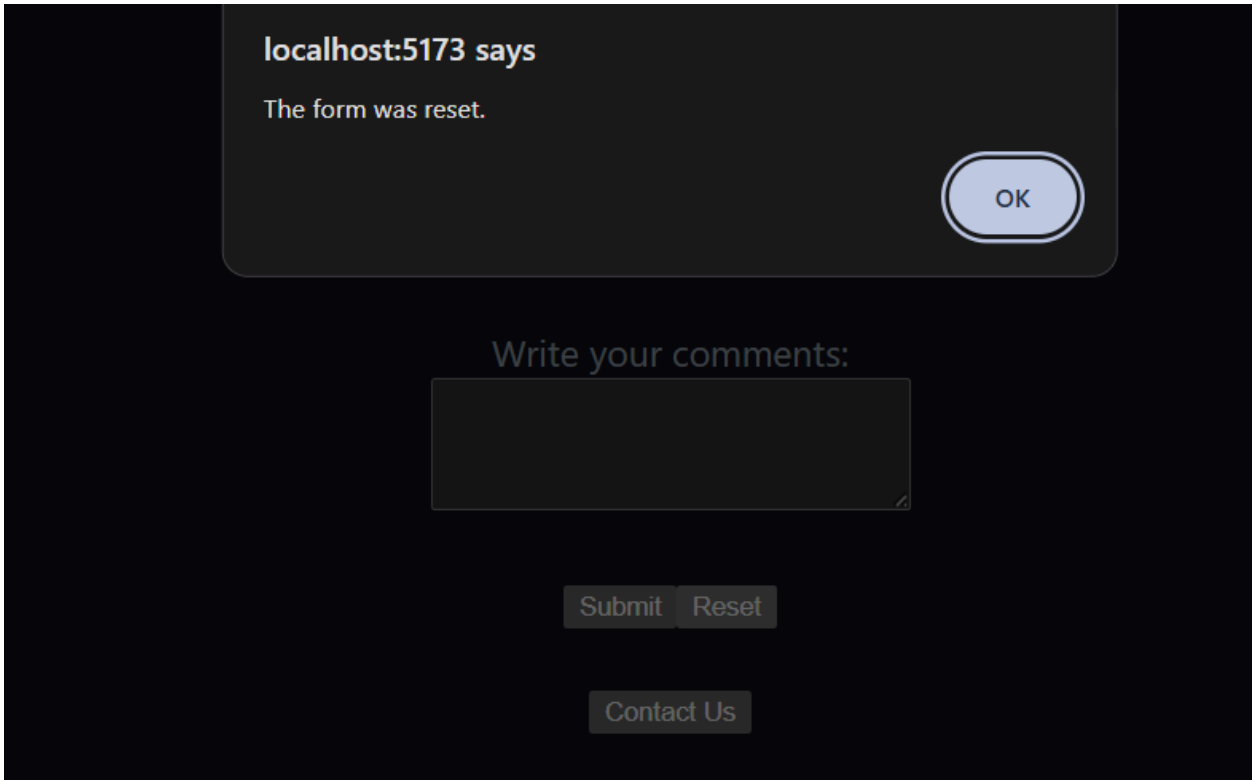

The onblur event worked successfully. The course textbox changed to red after I clicked outside the input field.

onselect

localhost:5173 says
You submitted the form.

onsubmit

onreset

Conclusion

Through this activity, I have gained knowledge about JavaScript event handlers and HTML forms. It is important to know that there are events such as onchange, onfocus, onblur, onselect, onsubmit, and onreset, which are able to react to various actions performed by the user.
