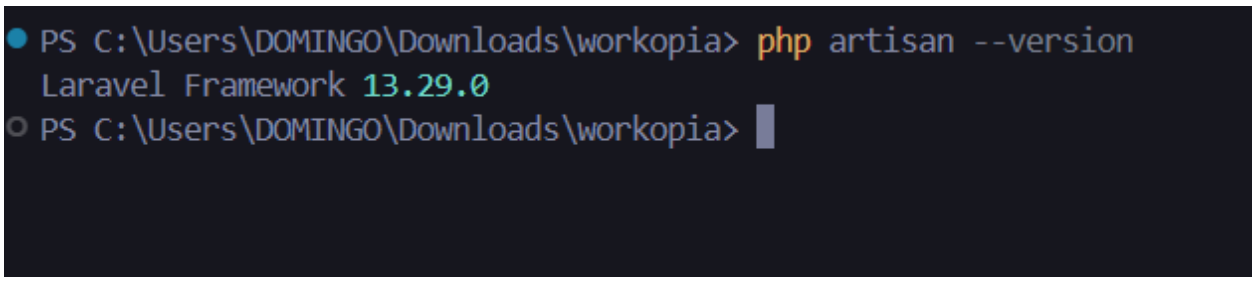

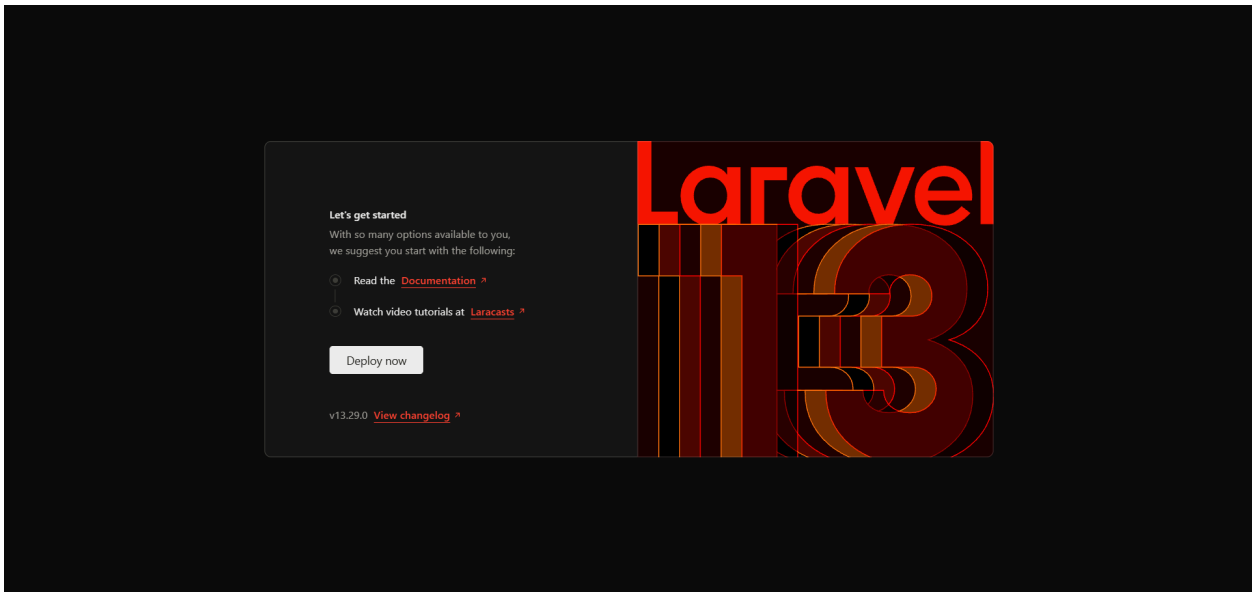

Figure 7. Laravel Development Server Running

```
PS C:\Users\DOMINGO\Downloads\workopia> php artisan --version
Laravel Framework 13.29.0
PS C:\Users\DOMINGO\Downloads\workopia> php artisan serve

  INFO  Server running on [http://127.0.0.1:8000].

  Press Ctrl+C to stop the server
```

Figure 8. Laravel Application Running Successfully

Conclusion:

In this exercise, I was able to successfully set up the development environment for Laravel on my PC. I downloaded the Laravel Herd software, checked the installation of PHP and Composer, and used composer to create a new Laravel project called workopia. After that, I opened my project in Visual Studio Code and confirmed the Laravel framework via Artisan command. Finally, I ran the Laravel development server and launched the application via the browser. Through this exercise, I learned how to set up a Laravel development environment on my computer.
